## ABOUT ME

I'm a Front End developer with a large amount of Full Stack and Graphic Design experience. I put a heavy focus on implementing reusable components and patterns utilizing tech specs, diagrams (flow, sequence, ERD) and testing (unit, functional) to deliver high quality code. Currently, I'm using my skill set to help convert a monolith codebase with a highly complex data layer into a componentized service oriented architecture while also delivering on feature work to support the needs of the business and mentoring my more Jr. peers.

My technical interests outside of work currently include functional programming, category theory and blockchain technology.

I'm looking for a fun, collaborative environment where I can work with an intelligent, curious and diverse group of peers to produce an innovative well-built product.

## TECHNOLOGIES

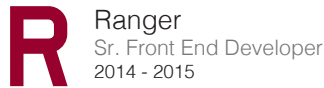

## EMPLOYMENT & EDUCATION

**Shapeways**  
Front End Engineer,  
Software Engineer  
2015 - PRES

Maintaining and improving a 3D printing marketplace and supply chain management system. Defining and implementing standards, mentoring peers. Projects included everything from payment processing to 3D modeling SPAs.
